or crease at 1/3 each way and then at 1,2,3 /12 this will produce a box that appears much larger without the annoying corner tuck at step “10”
sides = 1/3
height = 1/6

the box dimensions will be
sides = 1/4
height = 1/8
Folding the tips under would be easier at step "9".

Repeat on all four corners.

Lift up the inner square and collapse all 4 corners, tucking it under the center flaps.

Tuck under right edge (or whichever corner sticks out).

Fold the tips under. To enlarge the box put your finger in the center and push out the sides.

In the center fold tips under the first layer.

Partly lift up all four flaps.

To collapse push in the sides of the box.
